

verifyZkloginSignature

Verify a zkLogin signature based on the provided transaction or personal message based on current epoch, chain id, and latest JWKs fetched on-chain. If the signature is valid, the function returns a ZkLoginVerifyResult with success as true and an empty list of errors. If the signature is invalid, the function returns a ZkLoginVerifyResult with success as false with a list of errors.

The result of the zkLogin signature verification.
