

# ProtocolConfigs

Constants that control how the chain operates.

These can only change during protocol upgrades which happen on epoch boundaries.

The protocol is not required to change on every epoch boundary, so the protocol version tracks which change to the protocol these configs are from.

List all available feature flags and their values. Feature flags are a form of boolean configuration that are usually used to gate features while they are in development. Once a flag has been enabled, it is rare for it to be disabled.

List all available configurations and their values. These configurations can take any value (but they will all be represented in string form), and do not include feature flags.

Query for the value of the configuration with name key .

Query for the state of the feature flag with name key .
