Module sui::ed25519

@param signature: 32-byte signature that is a point on the Ed25519 elliptic curve. @param public_key: 32-byte signature that is a point on the Ed25519 elliptic curve. @param msg: The message that we test the signature against.

If the signature is a valid Ed25519 signature of the message and public key, return true. Otherwise, return false.

Function

@param signature: 32-byte signature that is a point on the Ed25519 elliptic curve. @param public_key: 32-byte signature that is a point on the Ed25519 elliptic curve. @param msg: The message that we test the signature against.

If the signature is a valid Ed25519 signature of the message and public key, return true. Otherwise, return false.
